

# GELATO COOLBOX TUBS

## TECHNICAL SPECIFICATIONS

GELATO COOLBOX TUBS is an isothermic container for transporting and serving artisan gelato made of rota-moulded polyethylene insulated with low-density injected polyurethane (40 kg/m<sup>3</sup>).

The top polyethylene cover is hinged on the container and opens 180° so that it can be used as support surface when serving the gelato (maximum load of 10 kg). The inside has 2 holes with stainless steel and insulated lids to contain 2 tubs with an anti-rotation system enwrapped by 4 cooling packs (2 per hole).

GELATO COOLBOX TUBS is designed to store gelato for 4 hours with the cover closed and more than 2 hours with the cover open (serving) in ambient conditions of 35°C and 60% RH. The cooling packs are to be inserted in the GELATO COOLBOX TUBS at -20°C, while the tubs containing the gelato are to be inserted at serving temperature.

In order to regenerate the 4 cooling packs, they have to be inserted in vertical position in the dedicated cooling rack and frozen at -20°C for 24-48 hours.

## OPTIONALS

GELATO COOLBOX TUBS is available in two colors:

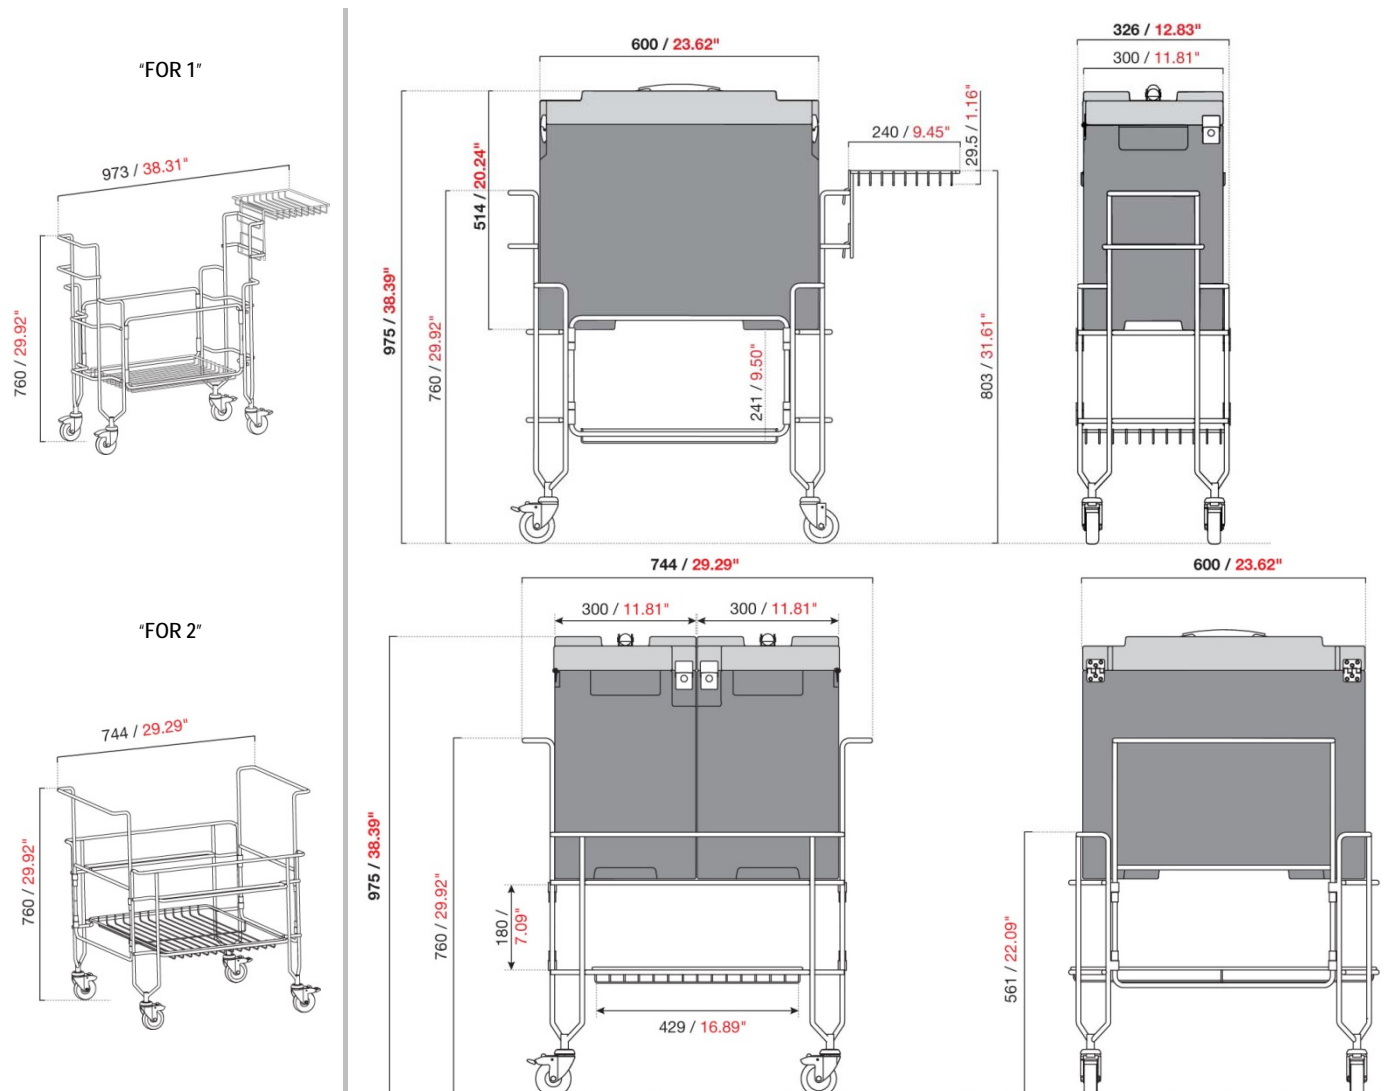

- moka, with white top cover;
- anthracite, with blue top cover.

OPTIONALS:

- anti-rotation tubs;
- additional set of cooling packs with shape-maintainer rack;
- cart for transport of one GELATO COOLBOX TUBS;
- cart for transport of two GELATO COOLBOX TUBS.

The cart is made of iron wire painted with epoxy powder at 180°C, and is foldable for easy transport.

The cart is equipped with 4 wheels, two of which with brakes, and two trays to place cones, cups and anything else necessary to the gelato service.

#### Cooling packs with shape-maintainer rack

The cooling packs must be inserted vertically into the shape-maintainer rack, so that the liquid freezes in the bottom, leaving the top air chamber.
